🔲 Also available in Marble Fiesta® and SafeTcork Fiesta®. Fiesta® and Symmetry palettes are available as a special order.

long-term benefits

Industry studies have shown that flooring materials with a higher initial cost do not necessarily translate to a higher cost in the long run. In fact, findings indicate flooring materials with a higher initial cost will perform more cost effectively over many years. For example, while rubber flooring may cost more initially, the cost of maintaining it is lower. And because it's extremely durable, it lasts a very long time. So, when examining long-term costs, it is important to consider the total cost of ownership. With the right information, you can help customers control costs - not just on the initial project, but also in the long run.

performance compound

Roppe Performance Compound Rubber Tile is a homogenous rubber tile specifically designed for use in areas that may be subject to oil, grease and other petroleum hydrocarbons. The natural durability and dimensional stability of Performance Compound rubber make this flooring ideal for most high traffic commercial installations that would otherwise not be able to withstand contact with oil and grease.

Performance Compound is durable enough to resist abrasion, impact, scuffs, gouging, burns and most chemicals, yet is also flexible enough to ease installation. The ability to maintain Performance Compound by dry buffing, rather than using waxes or finishes, decreases the long-term maintenance costs and environmental strain due to chemical use and waste.

Ideal applications include **automotive** (repair shops, quick lube facilities & automobile storage), **industrial** (manufacturing facilities, refining facilities & material storage) and **transportation** (repair facilities, garages and equipment storage).

Roppe Performance Compound Rubber Tile is only available in the following solid colors:
